

Ismael Cordón Domínguez

Senior Mobile Developer

Madrid, Spain | icdominguez.dev@gmail.com | +34 624657548 |

[LinkedIn](#)

When I join a team, I bring more than code: I bring technical judgment for architecture decisions, the ability to modernize legacy codebases, and a full-product vision backed by full stack experience across backend and databases. I have reduced technical debt on large-scale projects, implemented architectures from scratch, and autonomously delivered functional products under tight deadlines — covering everything from the app to the server. If you're looking for an Android developer who solves real problems and not just implements tickets, let's work together.

Professional Profile

Senior Android Developer with over **5 years of experience** building high-quality native applications in **Kotlin** and **Jetpack Compose**. I have worked in large-scale environments such as **Inditex** and on independently developed projects built from scratch, with a complete product vision thanks to my experience in backend and modern architectures such as **MVVM** and **MVI**. I focus on writing **clean, scalable and maintainable code**, meeting deadlines and delivering products that generate real results.

Achievements

6+ personal projects completed

Autonomous development of more than 6 personal projects exploring different architectures and technical approaches, including 2 projects in collaboration with international remote teams. Documented and available on GitHub.

App in production

Full development and ongoing deployment of an employee time-tracking application with geolocation, published on Google Play and the App Store, covering the entire product lifecycle.

Recognition in the Android community

Active member for over a year of Philipp Lackner's community, achieving third place on three occasions in collaborative technical challenges.

Professional Experience

Android & iOS Developer — Entelgy - Corporate Security BBVA — Remote, Madrid

Apr 2026 – Present

- Maintained and developed new features on BBVA's corporate applications for managing physical and digital access for employees across different geographical locations, including Spain, Argentina and Mexico.
- Worked autonomously as the sole Android and iOS developer, independently managing technical prioritisation and feature delivery.

Freelance Senior Full Stack Android & iOS Developer — Remote, Madrid

Jul 2025 – Apr 2026

- Built from scratch a SaaS employee attendance and time-tracking platform with real-time geolocation and push notification system, covering the full cycle: design, development and deployment.
- Implemented native mobile applications for Android (**Kotlin**) and iOS (Swift), with high-precision GPS integration for location-based clock-in validation.
- Built **CI/CD** pipelines for automated version distribution using GitHub Actions.
- Designed and developed the REST API with Node.js and a relational database with PostgreSQL, supporting multiple client companies with tenant-isolated data.

- Delivered the functional product in 4 months, currently in production with 2 companies and 18 active users, in commercial launch phase and pricing model definition.
- Autonomously managed the full infrastructure: domain, server, database and production environments.

Senior Android Developer — Axpe Consulting - Stradivarius — Remote, Barcelona

Jan 2024 – Jun 2025

- Participated in the migration of the catalogue module (grids) from **Java/XML** to **Kotlin, Jetpack Compose** and **multi-modular** structure, working closely with a team of 3 developers within an Android department of 13 people.
- Initiated and implemented the **MVI** architecture using **Kotlin coroutines** and **State/SharedFlows** for state management, establishing the technical standard for the project.
- Integrated accessibility standards into the catalogue module following specialised training, improving the experience for users with functional diversity.
- Implemented **A/B** tests with Growthbook to validate product changes and optimise the user experience in the catalogue.
- Managed dependency injection with **Dagger 2** and contributed to the adoption of unit tests with **JUnit 4** into the team's development workflow.
- Managed usage and stability metrics via **Firebase Analytics** and **Crashlytics**, monitoring and resolving production crashes.

Android Developer — Astrata International — Hybrid, Madrid

Feb 2022 – Jan 2024

- Developed and maintained multiple Android applications for the logistics sector, combining evolutionary maintenance and greenfield development in **Kotlin** and **Jetpack Compose**.
- Worked in a decoupled **multi-module** environment with **MVVM** and **MVI** architectures, **coroutines** and **StateFlows** for state and concurrency management, dependency injection with **Dagger Hilt**, local persistence with **Room**, and inter-app communication via **Content Providers**.
- Implemented custom **workers** for server requests and per-device **push notifications** with **Firebase Cloud Messaging**.
- Integrated geolocation and **Google Maps** for logistics tracking and management features.
- Collaborated on configuring **CI/CD** pipelines for automated version distribution using **Jenkins**.
- Contributed a broad technical vision by participating in backend development with Quarkus (**Kotlin**) and SQL Server, facilitating API integration and data contract definition.
- Collaborated in an international team of 8 people with daily communication in English.
- Contributed to React Native development for projects with cross-platform requirements.

Android Developer — Hasten Group - Movelia — Remote, Madrid

Oct 2021 – Feb 2022

- Developed new features in Movelia's official bus ticket sales application, working autonomously as the sole Android developer.
- Integrated the **Redsys payment SDK**, managing the complete purchase flow within the app.
- Worked with **MVVM** architecture, dependency injection with **Dagger 2** and server requests with **Retrofit** in **Kotlin**.
- Acted as mentor for a newly onboarded junior developer, introducing them to **Kotlin** and the project's best practices.

Android Developer — ICP Logística — On-site, Madrid

Mar 2021 – Sep 2021

- Developed and maintained Android applications for the logistics sector, participating in the migration from **Java** with no defined architecture to **Kotlin** with the **MVP** pattern.
- Built interfaces with XML views and worked with **Volley** for server requests, **Room** for local persistence, CameraX for camera access, **Glide** for image loading and **Google Maps** for geolocation management.

- Managed usage and stability metrics via **Firebase Analytics** and **Crashlytics**, monitoring and resolving production crashes.
- Participated in backend development with .NET C# and SQL Server, contributing full-stack visibility.
- Acted as technical reference for a junior developer, being responsible for reviewing and validating their work within a team of 4 people.

Android Developer — Serban Biometrics — On-site, Madrid

Mar 2020 – Mar 2021

- Developed and maintained biometric solutions for voice recognition and digital signature on Android in **Java**, focused on user authentication and document signing in the logistics sector.
- Participated in cross-platform development, also contributing to Web with Angular and desktop with C#.
- Collaborated on backend development with .NET C# within a team of 8 people.

Education

Joyfe, Madrid

Higher National Diploma in Multiplatform Application Development (DAM), Sep, 2016 – Jun, 2018

Upgrade Hub, Madrid

Full Stack Developer Bootcamp, Dec, 2019 – Mar, 2020

Areas of Expertise

- Native Android Development
- Mobile Software Architectures (MVVM, MVI, Clean Architecture)
- REST API Integration
- Full Stack Mobile Development
- Application Migration and Modernisation (Java → Kotlin, XML → Jetpack Compose)

Technical Skills

Kotlin: Multi-modularisation, Coroutines, StateFlow, AGP 9.0, Nav3

Jetpack Compose:

Dependency Injection: Koin, Dagger Hilt

Local Persistence: Room, Data Store, Encrypted Shared Preferences

API Integration: Ktor, Retrofit

Testing: Unit (JUnit5), UI (Espresso)

Image Loading: Coil, Glide

CI/CD: GitHub Actions

Languages

Spanish: Native

English: Intermediate (B2)
